## ABSTRACT

5

Systems and techniques for a signal having a first set of channels separated in a first format, and a second set of channels separated in a second format wherein a first parameter for a first one of the channels from the first set is measured, a second parameter from a second one of the first channels is measured, and the relative power between the first one of the channels and the second one of the channels from the first set of channels can be computed. The foregoing abstract is provided to comply with the rules requiring an abstract which will allow a searcher or other reader to quickly ascertain the subject matter of the technical disclosure. It is submitted with the understanding that it will not be used to interpret or limit the scope or the meaning of the claims.
